Food CategoryAll

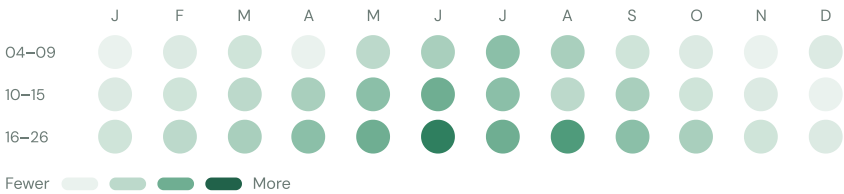

Reset

1,284 events · 4,910 products

When do recalls happen? Seasonality by month · dot matrix, both lenses

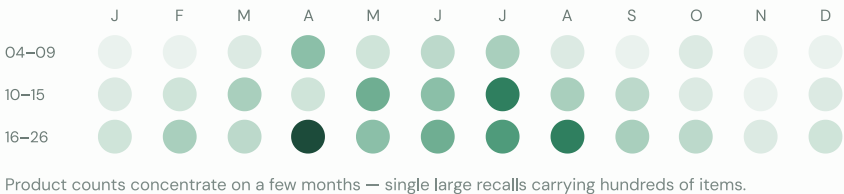

Lens A · Events

1,284 recall events

Lens B · Products

4,910 products

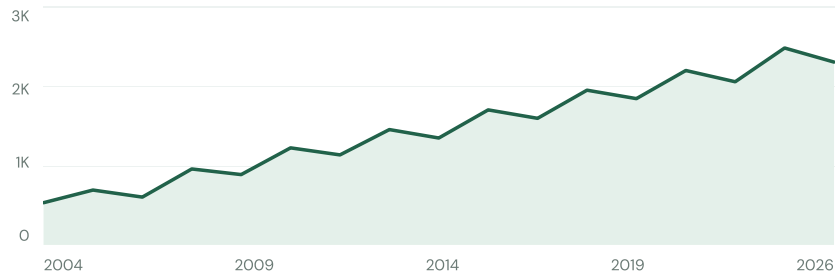

US Food Recall Explorer

continued · filters and Key Insights as on the previous page

How are recalls trending? Volume by year · line chart, both lenses

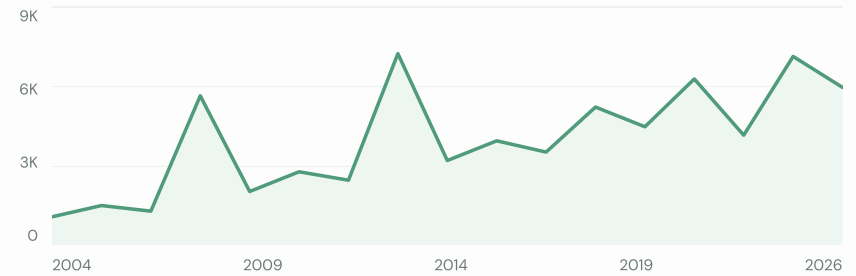

Lens A · Events

events per year

Lens B · Products

products per year

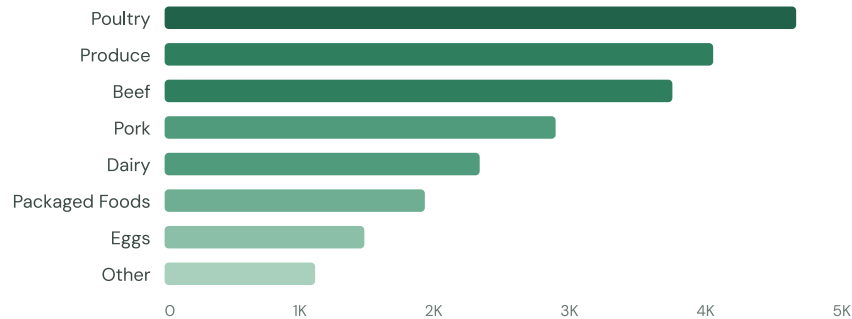

Note the spikes — product counts are dominated by a handful of very large recalls, so the two lines tell different stories.

What foods are most often recalled? Top categories · horizontal bars, both lenses

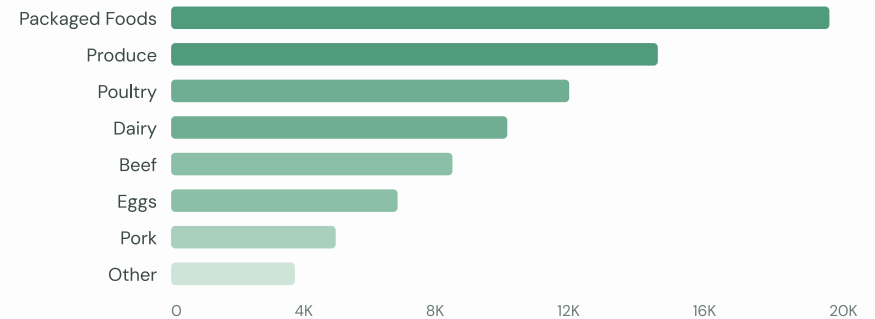

Lens A · Events

ranked by event count

Lens B · Products

ranked by product count

Ranking and axis scale both change with the lens — packaged foods lead by product count, poultry by event count.

About the data & limitations

Sources, aggregation methods, and what this data can and cannot tell you — including why rising counts may reflect better detection rather than less safe food.
